

**Good storage practices include:**

-  Have a spill kit on site and train your staff how to use it.
-  Storing liquids within secondary containment
-  Storing substances away from storm water drains and waterways
-  Storing substances on an impermeable surface (e.g. concrete)
-  Storing substances under cover
-  Securing substances against vandalism/theft
-  Storing substances away from high traffic areas
-  Make sure all storage containers are labelled.
-  Check regularly and before and after any rain for any spillages or any flooding
-  Check regularly that the containers are not damaged or have any leaks.

Directors: K.J. Murphy and A.N. Wild
